Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence[5' schools of the second was prepared with the primer adapter of sequence[5' schools of the second was the second with NoI and StI. Cloning sites, 5' end: SSII; 3' end: NoI. Host: SOLR.

/cloned with brain, liver, lung, kidney and muscle.
Directionally cloned. Priming method: oligo-dT. Average
insert size: 1800 bp. Library amplification: 26,000 fold.
